

Smith Optics

Both the **Mogul** and the Riverside models feature the company's scratch-resistant optical quality "Techlite" glass and Tapered Lens Technology that produces distortion-free vision in outdoors eyewear. The Polarchromic polarized lenses not only stop the glare, but they have tint-shifting photochromic technology under a variety of light conditions. The Mogul also has a hydrophobic and anti-reflective coating in a slight wraparound look that blocks out side rays. It is available in black with Polarchromic copper lenses, olive stripe with Polarchromic brown lenses, black with gray lenses, or tortoise with polarized brown lenses.

The Riverside offers a more traditional look and has a spring-hinged frame. The temple and nose pads are designed to fit medium to large faces. Colors include traditional favorites plus black with Polarchromic copper mirror, brown with Polarchromic brown, matte black with Polarchromic copper, and tortoise with Polarchromic amber lenses. www.smithoptics.com; 208-726-4477

Solar Bat

Solar Bat announces three new frame styles for 2009 that feature double-injection molding.

The **Double XL** and the Spike have Solar Bat's proprietary TCG (temperature controlled grip) material injected into specific areas in the TR90 frame material. This technology makes the frames grip your face tighter as the temperature gets hotter. The Spike frame is also available in distance and bifocal prescriptions.

The Z Tech is a new half-rimless style that features interchangeable lenses (sold separately) that fit close to the cheeks with sufficient lens wrap to block all sunlight from the side and maximize peripheral vision.

All three are offered with the Mossback gradient feature that provides two shades in one pair of sunglasses with a tilt of the head. When looking straight ahead the tint is amber, but when looking down the tint is yellow/green. www.solarbat.com; 800-761-8228

Tifosi

The **Torrent** model combines the sleek lines and style of the Dolomite and the comfort of the Q2 version. It provides a close fit in a frame that offers excellent vision coverage for small to medium size faces. It has hydrophilic rubber temples and nose piece, polycarbonate de-centered lenses and full UVA/UVB protection. The frames are offered in several colors, while the polarized lenses are interchangeable in various shades and colors. They can be fitted with prescription lenses. www.tifosioptics.com; 866-310-0996

Vicious

Two frames have been added: the **Coosa**, which has a larger frame in rubberized matte black or matte pearl; and the Sniper, a smaller frame with full coverage in a wraparound style offered in the same colors. Polarized lens offerings in both models are a green mirror tint. www.vicious-fishing.com; 866-645-0024

Wiley X

Several new polarized glasses have been added to the Climate Control and Active series for anglers.

In Climate Control, the Wiley X **Jake** black frame model now has a polarized mirror over amber tint to amplify color contrast for high definition and sharpness in all light conditions. The Wiley X Blink has silver flash lenses with aluminum gloss frames, while polarized blue mirror over gray lenses has been added to the AirRage. Like all Climate Control Wiley X glasses, the eyes are protected from wind, dust, debris and spray because of a removable, vented seal that locks into place. www.wileyx.com; 800-776-7842
